

Molecular Ecologist in Ocean Technology and Engineering

Dr Julie Robidart

Julie leads a biosensor program focused on the development and application of novel technologies for analysing marine microbes.

Career Pathway

As an oceanographer, a wealth of diverse opportunities are within reach and as a result, Julie has visited deep sea hydrothermal vents, worked with cutting-edge instrumentation, contributed to ground-breaking discoveries in carbon metabolism and led a major research cruise north of Hawaii.

Support for equality and diversity

Julie says “My development as a scientist and a Principle Investigator at the NOC has been facilitated by direct mentorship from senior levels, giving me a unique advantage as an early career scientist. I love my job.”
